Part 9: one-page report

Three key findings

1. Only 16,529 of 50,000 orders (33%) are Completed. Pending (16,610) and Cancelled (16,861) make up the rest, so completed revenue is 2.50 billion against 7.58 billion in total order value.
2. Beauty leads on revenue (581.0M, about 23%) and profit (284.8M). South is the strongest region (805.4M), and December is the peak month (224.7M).
3. The return rate is 4.88% and is spread evenly across categories (4.58% to 5.13%), with Home and Beauty highest. No single product is a serious problem. The most returned has 11 returns.

Three recommendations

1. Investigate why two thirds of orders stay Pending or Cancelled, and follow up on payment and fulfilment. Even a small recovery adds revenue.
2. Invest in Beauty, with deeper stock and promotions, and review the returns process for Beauty and Home.
3. Restock the 14 stores with items below reorder level, starting with STR006 and STR014, and build stock before December.

One risk: data integrity. 1,685 of the 2,500 returns (67%) are on Pending or Cancelled orders, which shouldn't be possible, and Products has no supplier link. Reports built on this data may be unreliable until the records are fixed.

One opportunity: Home has the best margin (54%) and Beauty the most revenue. Growing both while cutting their return rates would lift profit without relying on new customers.

Assumptions Made: revenue counts Completed orders only (Quantity × Unit_Price − Discount, shipping excluded). Discount is a flat amount. Membership Level is Customer_Segment. State is the store's state. Currency is not stated in the data dictionary.
